

**Country-level Summary of changes Table 2014.** Summary of species abundance changes for England (black), Scotland (blue), Wales (red) and Northern Ireland (green), where calculable, from 2013 to 2014 and long-term (over the entire time series; no. yrs max = 39 for England and Wales, 37 for Scotland and 11 for Northern Ireland) and short-term (last 10-years) changes. Significance of trends: \* P < 0.05 (significant), \*\*P < 0.01 (highly significant), \*\*\*P < 0.001 (very highly significant). Note: some country-level changes are based on relatively small sample sizes and thus should be interpreted with caution. Some species are recorded at country-level but at insufficient sites (currently) to perform accurate trend analyses. For these we present only the number of sites at which they were recorded in 2014.

Species	No. sites monitored in 2014				% change 2013-2014				Series trend				10-year trend
